Spanish *(Native)*
English *(B2)*

Experience

Génesis Aplicaciones
Junior Web Developer
01/2020 - 07/2021

I was in charge of developing and maintaining several solutions, the main one being the TimbraXML billing web application. Besides gaining a lot of knowledge of frontend and backend web development, I learned what is a good workflow among a professional development team, supported by version control tools, progression boards and effective communication channels.

- Deliver solutions web (PHP/CodeIgniter/JQuery) solutions for complex developments
- Turn core processes into documented libraries with modern and readable syntax
- Make flows with Git to avoid crashes between teammate's changes

Grupo Dicas
Technical Support Assistant
06/2019 - 12/2019

Originally tasked to be an assistant in technical support and server administration, I ended up doing all the engineering process to develop an Android application.

- Gather and interpret information about the experience of using software by users with little or no computer knowledge
- Used modern software design architectures (MVVM and observer pattern)
- Reverse engineer an existing system to integrate it to another with zero documentation
- Implemented a REST API with PHP and Laravel
- Secured the requests with JSON Web Tokens

Systems development trainee
Marbol Industria Mueblera
06/2018 - 08/2021

Member of the development team and mentored by my chief Felix Amaya Valencia, from whom I quickly gained recognition and was assigned tasks of the same weight as those given to permanent members of the team. Working there taught me to have a larger scale vision of a system and to understand the importance of knowing a problem in depth before writing even a single line of code trying to solve it.

- Design modules of the internal custom ERP system with C# Windows Forms.
- Create the backend for my modules using T-SQL tables and stored procedures.

Education

Instituto Tecnológico de Mérida
Engineer in Computer Systems Engineer
91.69
08/2016 - 12/2020

Volunteer

Scouts de México • https://scouts.org.mx/
Jefe de Tropa
03/2019 - Present

Awards

HackSureste 2018
Team MeseBot

Awarded third place for creating a high-impact innovation project. It consists of a system to deliver restaurant orders directly from the diner table to the kitchen through voice commands.

Publications

Costeapp
Side project

01/2020

An offline-first Web application (React, RXDB, react-hook-form, Bulma) for costing estimations of cooking recipes.

Asset validation application
Grupo Dicas

01/2019

An android application (Kotlin, Jetpack) to validate the existence of fixed assets with a QR code.

FiestasMexicanas
School project

01/2018

A Windows Forms (C#, .NET) desktop application for quoting, order management and piñata production.
